First, \_\_\_\_\_ are produced in the small seminiferous tubules of the \_\_\_\_\_ . These oval-shaped glands are protected by a sac called the \_\_\_\_\_ . After the sperm cells are produced, they are stored in a large coiled tube on the outer surface of each testicle called the \_\_\_\_\_ . From this tube the sperm go into a larger tube called the \_\_\_\_\_ , which eventually carries them to the external male reproductive organ, the \_\_\_\_\_ . Along the way sperm is nourished by a sugary fluid from the \_\_\_\_\_ , a chemical fluid from the \_\_\_\_\_ which is the most common site of cancer in men, and fluid from the \_\_\_\_\_ which are two small glands located near the bladder. These fluids plus the sperm cells combine to form \_\_\_\_\_ , the fluid ejaculated from the penis during \_\_\_\_\_ . Before a male can ejaculate, the spongy tissue surrounding the penis becomes engorged with blood causing the penis to become stiff and hard. This is known as an \_\_\_\_\_ . The tube that carries the semen from the body is the \_\_\_\_\_ . This tube also carries \_\_\_\_\_ from the bladder. Males can also have uncontrolled ejaculation during sleep, which are called \_\_\_\_\_ .
